

Rich-Client Tips

- (1) Documents created in Rich Client normally can be saved into local userdoc folder(s), just like a Desktop Intelligence document.
- (2) Documents will have a .wid extension
- (3) Documents can be worked on locally at any time both Online and Offline.
- (4) Documents can be exported to the InfoView Portal, to the folders/subfolder defined.
- (5) Documents can imported from the InfoView Portal and edited in Rich Client
- (6) Documents created/edited in Rich Client and based on Universe Data Providers, can be edited in WebIntelligence Thin Client once exported to the InfoView portal.
- (7) If a Rich Client document has multiple data providers that include personal data files, and the document is exported to the InfoView portal, it can be edited in WebIntelligence, but only the universe based Data providers. Any objects that are from a personal data file cannot be edited/changed.
